SUMMARY

I like working on products with real complexity and real users.

Developer for 13 years, most of them on React and React Native apps used by millions of people. I own systems end to end, work closely with product, design and backend, and care about performance and accessibility.

AI EXPERIENCE

- Use AI tools every day for coding, debugging, documentation and finding my way around large codebases
- Set up shared AI coding rules for the team (Copilot, Windsurf)
- Interested in how prompts and tooling change the way developers work
- Build small AI features and automations, in apps and in my own workflow
- Built an LLM step into a production feature, with its running cost kept under control

SKILLS

- React, React Native, Expo & Next.js
- TypeScript & JavaScript
- Cross-platform mobile architecture
- State management (Redux, Zustand, TanStack Query)
- Mobile performance & reliability
- App Store & Google Play releases
- APIs & working with backend
- Node.js, some Ruby on Rails
- Testing (Jest, React Testing Library, CI/CD)
- Accessibility (WCAG)
- Feature flags, staged rollouts & rollback
- Monitoring (Sentry, Datadog, CloudWatch) & analytics (Mixpanel)
- AI-assisted development & tooling
- Tech leadership, mentoring & code review

Tania Papazafeiropoulou

Senior Front-End & Mobile Engineer & Tech Lead

hello@tany4.com United Kingdom / Greece tany4.com

KEY STRENGTHS

•Shipping cross-platform apps

•Front-end architecture that stays easy to change

•Performance & accessibility

•Working closely with product, design and backend

EXPERIENCE

05/2026 - Present

Senior Mobile Engineer (Contract) - The Ready Collective

A platform for young athletes (R1). I work across the React Native app, the web app and the Node.js backend. Three-month contract, now continuing month to month.

- Built food logging for young athletes, with child-appropriate food ratings and an LLM step whose running cost is kept under control.
- Designed how the team ships risky changes behind feature flags, turned on through code review.
- Built the Mind and Energy progress logic and family sharing, so a child can be shared with a second parent and a coach.
- Wrote the release smoke-test protocol the team runs before every release.
- Work on the Next.js web app and the Node.js backend.

08/2023 - 03/2026

Front-End Tech Lead - Olio

A food-sharing app used by millions of people. I joined when there were fewer than 20 people and 3 developers, and worked there as it grew to over 100.

- Set the front-end direction for the partner and volunteer platforms, weighing product needs against UX and long-term maintenance.
- Led the rebuild of a 10-year-old scheduling system, migrated in small steps with feature flags and rollback. No disruption to users, and long-standing bugs gone.
- Led internationalisation of the partner platform: locale-aware dates and times with Luxon, and Chinese as a new language.
- Built the impact data dashboard for business partners end to end: impact cards such as households fed, a grid view and a downloadable PDF report.
- Redesigned the store confirmation flow on my own, end to end. Issue reports dropped by about 90%.

CERTIFICATIONS

Completed Leadership Training: Human Leadership

July 2024

HOBBIES AND INTERESTS

I enjoy dancing, running, swimming, watching movies and spending time with my dog, Mario.

EDUCATION

09/2010

University of Patras
MEng: Computer Engineering & Informatics

08/2012

University of Edinburgh
MSc: Bioinformatics

LANGUAGES

Greek
First Language

English
Proficient (C2)

French
Beginner (A1)

- Built Tomorrow's Collections for the partner platform, turning per-business availability rules into a simple view for operations teams.
- Shipped backend changes in the Rails API: collection claiming rules, event tracking, admin tools for store inductions and notification rules.
- Added Sentry error handling, CloudWatch dashboards and Mixpanel tracking to the partner and volunteer platforms.
- Built hackathon prototypes, such as a partner platform and an AI-assisted appointment planner, to test ideas before committing to them.
- Mentored engineers through pairing and code review, while still writing production code every day and helping unblock hard problems.

09/2018 - 08/2023

Senior Front-End Developer - Olio

- Promoted from mid-level to senior in about a year.
- One of a small team that built Olio's React Native app from scratch and shipped the first version in 3 months.
- Ran the App Store and Google Play releases, coordinating with product, QA and backend.
- Built the map view in the React Native app end to end: marker clustering, filters, a card carousel and current location. Fixed the app hanging by stopping markers re-rendering too often.
- Led the move of the volunteer platform from Rails views to a React SPA, setting up routing, navigation and component patterns from scratch.
- Then designed and built the flows that let charity volunteers use it alongside Olio volunteers.
- Added Datadog monitoring to the React volunteer platform.

08/2017 - 08/2018

Front-End & App Developer - Esquared Technologies

- Built features for an Angular 2 app, working directly with the founders and designers.

03/2016 - 08/2017

Web Developer - Cult Beauty

- Built UI features for a high-traffic e-commerce site. Worked on checkout and payment flows, integrating third-party payment methods including Klarna and PayPal. Contributed to both frontend and backend PHP code.

07/2014 - 02/2016

Web Developer - IDG UK

- Built editorial and publishing tools for sites including PC Advisor, Macworld, ComputerWorld, Digital Arts Online and TechWorld.

01/2013 - 07/2014

Junior Software Developer - Kantar Worldpanel

- Built internal data tools and reporting automations.
